Filter Media

Filter Media

Rolled Filter Media supplied at various widths to your requirements.

Max width to 2450mm. Roll lengths vary between 100mts and 1372mts.

Interfil offer a total package when supplying filtration equipment, one significant component being the filter media employed. The required separation of solids from the process determines the characteristics of the filter media required. Interfil's engineers determine the exact match of filter media for your application taking into account solid matter to be separated, solid retention capacity and flow rate required.

For Industrial process and waste water filtration a well balanced range of filter membranes are available.

Filter media ranging from 150 micron down to 5 micron particle removal.

Interfil products include:

- 100% Nylon
- 100% Polyester
- 100% Polypropylene
- Polyester/ Polypropylene Needle Felt
- Polyester / Viscose blend

Interfil filter media are employed in the following processes:

- Waste Water
- Hot and Cold Rolling
- Washing / Cleaning
- Course / Fine Machining
- Course / Fine Grinding
- Wire Drawing
- Lapping
- Honing
- Milling
- Turning
