Oil and Water Absorbents

◆ RAPID Absorb 200

Rapid 200 has been designed to absorb both petroleum based spills and water based spills. The material is ideal for maintenance matting, where oily work is conducted or under machines where oily/ coolant leaks cannot be eliminated. After the Rapid Absorb has absorbed the solution (Nominal 3 litres per square metre), personnel can remove the Rapid Absorb from beneath the machine with minimal effort and time spent.

Its unique fibre structure allows the material to be easily torn from the roll but still maintaining strength under wet conditions for later removal. Fibres also maintain their structure, preventing linting and eliminating material deposits on the floor after removal.

The material has two sides, the topside having a tougher surface to help minimise contamination of the workplace, the other side exposing the fibres for maximum dispersion of fluid.

The Rapid Absorb has been designed to absorb the oil amongst the fibres, locking and retaining the trapped solution for non-dripping when disposing at a later date.

Rapid Absorb being Australian owned and produced is considered of the highest quality but yet the cheapest price.

- Absorbs Emulsions (Petroleum based plus water Mix)
- Absorbs Petroleum Based Solutions
- Absorbs Water
- Easily tears across the roll for quick application
- Oil retained in the product with unique locking action
- Oil absorbency capacity of Nominal 150 litres per 1000mm wide roll

◆ Oil Absorbents

Spill Kit Refills – Soaks up unwanted leaks

Quick Spill Response

Absorbent Rolls / Pads for Oil, Water, Coolants, Paint, Dyes and Inks

Rolls designed to easily tear from the roll.
Proudly an Australian Product.

Standard Size Roll

1000mm wide x 50mts long

500mm wide x 50mts long

Standard Pads

500mm x 500mm square x 100 pads

Nominal Absorbency Capacity

3 litres per square metre
